

TEN years of Quality Improvement

The world was quite a different place in 1999, when Ohio KePRO became Ohio's Medicare Peer Review Organization (PRO) in the 6th Statement of Work (SOW). There was still talk of the healthcare industry being "recession-proof," and we had not yet experienced 9/11, SARS, Hurricane Katrina, or H1N1. Since then, we've had three U.S. Presidents, each with a different perspective on the healthcare system. Ohio has had two governors, and an aging population that has expanded from 1.7 million Medicare beneficiaries to over 1.8 million.

In this changing environment, our areas of focus and approach to quality improvement have shifted with changes in the Medicare quality improvement program—including the shift from PRO to Quality Improvement Organization (QIO), an increased focus on pay-for-performance (P4P) initiatives, an emphasis on health information technology (HIT), and a move toward quality improvement across care settings. With U.S. life expectancy steadily increasing,

Medicare has moved to the forefront of the healthcare discussion, making a value-driven approach more important now than ever. By working with healthcare partners and stakeholders, Ohio KePRO continues to play an active role in driving quality improvement efforts statewide. Below are some QIO and industry highlights from the past decade.
